

Family Adoption Program - 2024 MBBS Students

On 7th April, coinciding with World Health Day, the 2024 batch students of the Department of Community Medicine participated in the Family Adoption Program (FAP) at Amudalapadu.

As part of the program, students visited their allotted families, interacted with them, and assessed their health status, living conditions, and healthcare needs. They also provided basic health education and guidance on preventive and promotive aspects of health.

This field activity plays a vital role in helping students understand community-based healthcare, develop communication skills, and build a strong doctor–patient relationship at the grassroots level.
